

Ideation Phase Empathize & Discover

Field	Details
Date	28 September 2026
Team ID	SWTID-2026-4815
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Persona: ServiceNow Incident Management User (Support Agent handling High Impact Incidents)

Section	Details
What does he THINK AND FEEL?	Worried about missing the Assigned To field on High Impact incidents; frustrated when incidents get escalated without an owner; wants a reliable way to enforce ownership on critical tickets
What does he SEE?	Incidents with Impact = High sitting unassigned; Urgency values inconsistently set on high-impact tickets; State field getting changed carelessly from the list view
What does he HEAR?	Manager insists High Impact incidents must always have an owner and correct Urgency; team lead complains about State being changed without opening the record
What does he SAY AND DO?	Sets Impact quickly without always assigning an owner; sometimes edits State directly from the list view for speed
Pain	High Impact incidents get saved without an assignee; Urgency not automatically aligned with Impact; State changed accidentally from list view without proper review
Gain	Wants Assigned To to be enforced only when Impact is High; wants Urgency to auto-update for High Impact; wants State changes only allowed via the form, not the list
