

Ideation Phase Brainstorm & Idea Prioritization Template

Field	Details
Date	28 September 2026
Team ID	SWTID-2026-4815
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Problem Statement Focus: How might we ensure High Impact Incidents always have a mandatory owner and correct Urgency, while protecting the State field from uncontrolled list-view edits?

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Team gathered to define the problem: High Impact Incidents are sometimes saved without an Assigned To, Urgency is not automatically aligned with Impact, and the State field can be changed carelessly from the list view.

Step-2: Brainstorm, Idea Listing and Grouping

Idea No.	Idea	Group
1	Create a UI Policy 'High Impact Control' to make Assignment group mandatory and Urgency read-only when Impact = High	Declarative Config
2	Add onChange Client Script to auto-set Urgency to High when Impact is set to High	Client-side Scripting
3	Add onSubmit Client Script to block save when Assigned To is empty for High Impact incidents	Client-side Scripting
4	Add onCellEdit Client Script to block direct State field edits from the list view	Client-side Scripting
5	Send email notification for unassigned High Impact incidents	Rejected - reactive, not preventive
6	Build a custom UI page for High Impact incident handling	Rejected - unnecessary complexity

Step-3: Idea Prioritization

Idea	Importance	Feasibility	Priority
UI Policy - High Impact Control (Assignment group mandatory, Urgency read-only)	High	High	Selected
onChange Client Script (auto-set Urgency)	High	High	Selected
onSubmit Client Script (Assigned To mandatory)	High	High	Selected
onCellEdit Client Script (block State list edit)	Medium	High	Selected
Email notification system	Low	Low	Rejected
Custom UI page	Low	Low	Rejected

Final Selected Approach: Create a UI Policy 'High Impact Control' (Impact = High -> Assignment group mandatory, Urgency read-only, Reverse if false = true) combined with three Client Scripts - onChange (auto-set Urgency), onSubmit (Assigned To mandatory for High Impact), and onCellEdit (block State list-view edits).
